The next generation platform for Collaborative Drug Design

Never Miss a Good Idea

A project team can generate new ideas far more quickly than it can record and analyze those ideas, especially in brainstorming meetings. Every dropped idea is a missed opportunity to find a path forward through the complex maze of drug discovery.

LiveDesign can keep up with your entire project team, allowing every idea to be captured, analyzed, and prioritized, leading to a fuller exploration of chemical space.

[Learn More](#)

Get the Most Out of Modeling

When modeling workflows are slow and cumbersome, they restrict the team's ability to explore broadly, making it harder to find and choose the best ideas for synthesis.

Publishing validated models into LiveDesign allows each team member to gain quick model-based feedback on their initial ideas, accelerating the selection of the best ideas to share with the group.

Tunetwist

Take your setlist with you.

Quickly create songs with an intuitive interface for chord and lyrics entry, whether you're at home or on the go.

Share your ideas and setlists with band members. Collaborate in real-time.

Drag and drop songs into playlists to prepare for shows, streamline practice, and keep your ideas organized.

Take your songs to practice or to gigs. Keep your band on the same page with synced setlist order, songs, and live instant transposition.
